REPAIR SERVICES

WIT service technicians have been repairing, converting, and building hydraulic systems and components for decades. WIT techs can service almost anything, even if the manufacturer of your product doesn't show up on our line cards.

- WIT will assess the problem with the product
- Quote the necessary repairs and lead time
- Perform the agreed repairs
- Test the unit to ensure proper function
- Ship it back to the customer

WIT service technicians will do whatever it takes to make sure your damaged or worn out hydraulics are back up to 100% working order before returning them to you. No job is too big or too small.

Component Sales

Customer satisfaction is our commitment at WIT. We have developed a team of highly qualified associates, offering superior service throughout our network of locations. Our knowledgeable WIT customer service team distinguishes itself by providing prompt and accurate responses to our customers' needs.

Manufacturing

WIT engineering and manufacturing personnel have decades of combined years of experience building hydraulic power units for marine, lumber, power generation, aerospace, and manufacturing industries. WIT has in-house machining capabilities, including CNC machines that incorporate state-of-the-art manufacturing practices for valve manifolds, governor adapter plates, and power unit support products. With WIT installation crews available to install power units, flush plumbing, startup, and commission of the system, WIT gets the job done.

Partnering with Leading Edge Companies to Make Systems Stronger, Faster, Smarter, and More Energy Efficient
