

December Product of the Month! Hydraulic Hoses

WIT is not only a seasoned supplier of Parker hydraulic hoses, we also have several hose repair and build centers for fast turn around. With many offshore manufacturers struggling to get inventory of standard hydraulic hose. Parker and Parkers' domestic manufacturing facilities keep inventories moving.

At WIT, we do **What It Takes!**

Model # 387TC Parker Hydraulic Hose

Parker 387 bulk hydraulic hoses are used to carry petroleum-based fluids and lubricating oils. They have a maximum constant working pressure of 3000 psi. The hoses' tube and cover are made from synthetic rubber. These hoses are reinforced with one steel braid. Parker 387 hydraulic hoses are compatible with Parker 43 series crimpable fittings.

Model # 787TC Parker Hydraulic Hose

Parker 787 bulk hydraulic hoses are used to carry petroleum-based fluids and lubricating oils. The hoses' tube and cover are made from synthetic rubber. They are reinforced with either four or six compact spiral steel wires, making them light, durable, and easy to bend. Parker 787 hydraulic hoses are compatible with Parker 43 or 77 series crimpable fittings.

Model # 797TC Parker Hydraulic Hose

Parker 797 bulk hydraulic hoses provide enhanced chemical compatibility and service life with a compact design for tighter routing. They are used in high-pressure industrial and hydraulic applications to carry petroleum-based fluids and lubricating oils. The hoses' tube and cover are made from synthetic rubber. These hoses are reinforced with either two steel braids or four or six compact spiral steel wires, depending on the hose size. Parker 797 hydraulic hoses are compatible with Parker 43 or 77 series crimpable fittings.
